

JD - Job Description

Sr QA Manual Engineer - AirFi

Who are we:

AirFi is a market leader in providing portable Onboard Passenger Entertainment and Mobile Crew Sales Solutions to various passenger travel segments. Founded in 2011 in The Hague, Netherlands - AirFi is the world's fastest-growing company in mobile InFlight Entertainment space and in providing ancillary sales solutions to enterprise customers.

AirFi brings disruptive innovations in a cost-effective manner to the airline cabin and other modes of passenger transport mediums and is making thousands of passengers and crew happy every day all over the globe!

About the Job Opportunity:

As this is a remote job, we would expect the candidate to have a reliable high-speed internet connection, a quiet workspace and be able to work in the timezone overlapping with the teams in the company.

Your key responsibilities:

- Responsible for segments of test planning, design and execution, meeting planned scope and schedule
- You will determine the proper prioritization of the testing activities and ensure integrative work and full coverage of test scenarios based on the test plan and observations from concurrent testing activities
- You will define the execution test plan, scope and resources required
- You will design test solutions to be implemented and executed in alignment with the planned scope and design coverage and customer needs/use
- You will support and promote test efficiency and optimization initiatives
- You will oversee and perform test execution activities, including implementation of test automation procedures and scripts
- Provide recommendations for issue resolution, system optimization and test

efficiency

- You must pay very close attention to detail and manage testing tools, reporting results, and motivate process improvement

What we look for:

- 3-7 years of experience in testing web and mobile applications
- Expertise in developing test strategies, test environment setup, test data setup, test plans and test cases
- Establishing testing processes in accordance with industry best practices to ensure quality and efficiency.
- Proven experience in creating clear and comprehensive bug reports and overall project reporting.
- Should have Good QA Perspective and the understanding of release dynamics
- Should be result driven and go-getter attitude who can show work independently with minimal supervision
- Creative, Self-motivated, willing to learn new technologies and able to handle challenges
- Exposure to testing REST/ SOAP web-services and working in an Agile/ Scrum model is a plus
- Hands-on experience with working with tools like Jira or similar
- Must have a Basic Knowledge on Linux
- Knowledge of modern best practices for professional software development including source control management (GitHub), build processes, release management and development

You get bonus point for:

- Affinity with airlines, the most exciting industry in the world (travel may be required at some point)
- Exposure to product development, self-driven, highly motivated and you must be independent in managing your own components or features
- You must possess an affinity for metrics and analytics - You must be proactive and must move fast or pivot to meet the changing needs of the product

- You care deeply about writing quality/testable/modular code and have a passion to suck every bit of performance of the code
- Experience in Developing Test frameworks using any modern-day scripting languages
- Expert-level coding skills in one or more programming languages with importance to clean code and best practices (Java / Javascript / Python)
- Good understanding and experience in automation frameworks & tools such as Selenium Webdriver, Nightwatch, Appium, TestNG, JUnit is a plus
- Experience in CI/CD development environments/tools: Git, Maven, Jenkins, TravisCI, CircleCI etc.

What You Can Expect from Us:

We try to provide opportunities that not only satisfy your creative instincts but also allow you to make a significant impact on the products that we create and the business we are in. We boast of a professional and fun work environment with a flat hierarchy of super supportive people to work with.

We always welcome new ideas! There's no such thing as a bad idea at AirFi, so all you have to do is shout it aloud and we'll hear you! We support initiatives or multiple roles taken out of individual interest giving way for global team collaborations and a highly dynamic work environment.

AirFi is a true remote first company - You are free to work from Anywhere in the world. Your work productivity matters - not your location or work timings! Hence, it's not uncommon to see our CodeGurus coding from mountaintops one month and a beachside shack the next.

Some Of Our Cherished Benefits For You:

- Remote working and flexible work timings
- Liberal policies including genuine open-door policy and special focus on keeping our work culture non toxic
- A very liberal leave policy that includes paternity, adoption and sabbatical leaves
- Skill Enhancement sponsorships

- Regular team engagement activities including the quarterly (destination/off site) meetings and the annual family gala dinner!
- Opportunities to travel to our customer locations across the globe or our HQ
- Tax Saving Meal cards
- Random little birdies delivering AirFi Goodies to your doorstep
- Career longevity perks and so on!

AirFi is committed to having a non toxic culture with special focus on work life balance, flexible work timings, regular work-cations (these may or may not include some beer-fuelled dance-offs!) and milestone celebrations are only some of the things that make AirFi an interesting place to work!

In short, we're right in the middle of making Aviation tech history and we invite you to be part of it!
